Exercise: odd

5.0 points possible (graded)

ESTIMATED TIME TO COMPLETE: 3 minutes

Write a Python function, `odd`, that takes in one number and returns `True` when the number is odd and `False` otherwise.

You should use the `%` (mod) operator, not `if`.

This function takes in one number and returns a boolean.

```
1 def odd(x):  
2     '''  
3     x: int  
4  
5     returns: True if x is odd, False otherwise  
6     '''  
7     # Your code here  
8
```

Press ESC then TAB or click outside of the code editor to exit
